

Cover Letter

Dear hiring team,

I am excited to apply for the Data Analyst position at TryHackMe. With over five years of experience as a Ph.D. candidate and data steward, I have successfully transformed complex data into clear, actionable insights. My strong skills in data manipulation using SQL, R, Python, and Julia, along with my hands-on experience in Tableau, Power BI, Streamlit, and Plotly, provide me the confidence to quickly adapt to your needs and contribute to your team. I thrive in fast-paced environments, especially those that offer learning opportunities to support TryHackMe's mission.

In my previous roles, I had managed the entire analytics infrastructure, from developing data pipelines to creating dashboards and visualisations that effectively communicated insights to my supervisors and collaborators. I excel at working with cross-functional teams and am skilled in mediating across different disciplines. My experience in event-data analysis is particularly relevant for this role. As a proactive problem-solver with a passion for continuous improvement, I am eager to apply my skills and enhance TryHackMe's analytical capabilities. I believe my experience and commitment to data excellence make me a strong candidate for this position.

Sincerely yours,

Babäk Firoozi Fooladi
