

Dear Vektor.io hiring team

I'm writing to express my interest in the Technical Customer & Partner Success Manager role at Vektor.io. While I'm early in my career, I'm drawn to this position because it sits at the intersection of spatial data and customer-facing work — an area I'm genuinely motivated to grow into.

My background is in town planning, where I worked with spatial and building data, giving me a foundational understanding of how geographic and design information is used in real-world projects. I don't yet have deep, hands-on experience with construction workflows or BIM/GIS platforms specifically, but I have a strong interest in the space and a track record of picking up technical tools quickly when they're relevant to my work.

I'm a fluent English communicator, comfortable explaining ideas clearly to different audiences. I'm also energized by the idea of helping build processes and materials in a growing, international team, rather than stepping into something already fully defined.

I recognize this role calls for more direct technical and customer-facing experience than I currently have. What I can offer is a genuine willingness to learn fast, a spatial-data foundation to build from, and real enthusiasm for the problem Vektor.io is solving. I'd welcome the chance to discuss whether that combination could be a fit, even if not immediately at full speed.

Thank you for considering my application.

Best regards,

Babak Firoozi Fooladi
