

Dear Neste hiring team,

I am writing to apply for the Finance Trainee position within Neste's Global Financial Services team in Espoo. I am a researcher and data professional at Aalto University, possessing hands-on experience in research, analysis, problem-solving, and documentation. I would welcome the opportunity to leverage these skills to deepen my understanding of the financial sector.

In the early stages of my career, I was responsible for financial planning, cost metrics, and double-entry bookkeeping for a family manufacturing business. My role involved managing documents, calculating costs, and preparing financial reports to support executive decision-making. Although the scale of the business was small, I utilised that information to forecast future orders and ensured that we maintained adequate materials for these predictions, which frequently proved accurate. Additionally, I recognised the importance of precise bookkeeping through identifying discrepancies in accounts and conducting thorough due diligence.

Since then, I have developed a career centred on applying quantitative and analytical rigor to real-world data. As a PhD candidate at Aalto University and a data analytics consultant, I have designed data pipelines, automated reporting workflows, and worked with extensive, detail-sensitive datasets where accuracy and consistency are paramount—skills that are directly applicable to finance operations involving vendors, customers, master data, and journal entries. I am adept at quickly learning new systems and take pride in being detail-oriented and reliable, qualities that I understand are essential for success within GFS's team environment.

I am fluent in English, have an intermediate proficiency in Finnish, and am a motivated, collaborative team player who thrives on learning the practical, large-scale finance processes that a global company like Neste relies upon. I am available to commence work on 1 September 2026 and would be keen to continue in the role through August 2027.

Thank you for considering my application. I would be pleased to discuss how my background in finance, data, and detail-oriented analytical work could contribute to your team.

Yours sincerely,

Babak Firoozi Fooladi
