

Cover Letter

Dear Recordly team,

I am applying for the Data Engineer position at Recordly. I am proficient in end-to-end data engineering, spatial analytics, and academic research at Aalto University. I am particularly interested in Recordly, as I have applied to this company before, because it offers data services to the industry. This means that projects would constantly change and require extensive domain knowledge and an understanding of clients' industries. Hence, I believe my capabilities would be fully utilised at Recordly.

Over the past several years, I have designed and maintained production-grade ETL/ELT pipelines, built DuckDB- and PostGIS-backed data lakes, and led a Pandas-to-Polars migration that delivered an 86% performance improvement in targeted pipeline calculations and a 60

I understand that Recordly is particularly interested in experience with Snowflake and dbt. While I do not have direct experience with these solutions, I believe my understanding of the processes and my ability to learn quickly can compensate for this. I adapt efficiently due to my solid foundation in data modelling and pipeline architecture.

As a tech-agnostic consultancy, Recordly values broad expertise and the ability to communicate clearly across disciplines. I have lived in Finland for eight years and hold a valid residence permit, so there are no logistical barriers on my end. Additionally, I am actively trying to learn Finnish and use it in my everyday life.

I would welcome the opportunity to discuss how my background aligns with what Recordly is building.

Ystävällisin terveisin,

Babäk Firoozi Fooladi
