

Cover Letter

Dear Reetta Ruusunen and Hiring Team,

I am writing to express my strong interest in the Data Analyst/Engineer position at Aalto University Executive Education and Professional Development. With over five years of hands-on experience building data pipelines, structuring complex tabular and panel datasets, and deploying analytical workflows in Python, R, and SQL, I am eager to contribute to Aalto EE's data foundation and digital transformation.

As a doctoral researcher in real estate economics, I have served as primary data owner across the full lifecycle from raw extraction and cloud/database integration to quality verification, anomaly detection, and delivering clean data for decision-making. This has meant building ETL/ELT pipelines and transforming messy, multi-source datasets into structured models for applied econometrics and quantitative analysis. I bring strong expertise in financial, spatial, and operational data modelling, along with proficiency in Power BI and advanced Excel, enabling me to build clear, reliable reporting architectures. Managing academic and applied research projects has also sharpened a self-directed, methodical approach: I take ownership of critical initiatives while collaborating smoothly across teams to support decision-making.

Having built a career on rigorous quantitative research in higher education, I find the opportunity to support life-wide learning and shape Aalto EE's AI transformation genuinely meaningful. I thrive on turning complex data into actionable strategic insight, and I'm excited to bring that analytical rigour, technical expertise, and proactive mindset to your team.

Thank you for your time and consideration. I look forward to discussing how my data engineering and analytical skills can help drive Aalto EE's strategic initiatives forward.

Kind regards, Babäk Firoozi Fooladi
