

Dear CREA's Hiring Team,

I'm applying for CREA's Data Scientist position. I have been looking for a position like this where I can use my quantitative research skills in practice and for the benefit of the world. I've built reproducible pipelines, integrated messy proprietary and open datasets, and visualised findings for technical and non-technical audiences in data engineering, spatial econometrics, and BI development for six years. My PhD research uses econometrics and time-series methods to study housing markets, requiring the same independent, open-ended investigation and clear communication as this role. I'm proficient in Python and R, use Git, and have worked with Azure and GCP workflows. CREA's mission of producing timely, evidence-based insights to shape clean energy and air quality decisions excites me.

I am eager to further discuss my skills in person. The examples of my work are available on my GitHub, resume and my website.

Sincerely yours,

Babäk Firoozi Fooladi,
