

Cover Letter

Dear Nordea Hiring Manager,

I am writing to apply for the position of Quantitative Risk Analyst at Nordea in Helsinki. I bring over five years of experience in building data pipelines, ensuring data quality, and transforming complex, messy datasets into clean, verified, and accurate information in the field of real estate economics research for quantitative analysis and econometric modelling.

I have mastered the data manipulations using R, Python, and Julia for tabular, NoSQL and spatial datasets. During my employment as a doctoral candidate, I was responsible for data ownership, data cleaning and serving data for the researchers. In addition, as research requires meticulously accurate data, I gathered experience in verification and outlier and anomaly detection. I have learnt how to structure time-series and panel datasets and verify their quality.

I am comfortable working across the full data lifecycle, and I enjoy the detail-orientated, quality-driven problem-solving that this role requires. I would appreciate the opportunity to discuss how my experience in data engineering, spatial and applied econometrics, and pipeline optimisation could contribute to Nordea's credit risk model.

Thank you for considering my application. I look forward to the chance to discuss this role further.

Kind regards, Babäk Firoozi Fooladi
